

Frisco Inspection Findings

What 3,166 city inspection reports show about restaurant violations, who writes them up, and what the public portal leaves out. An independent fact-checker recomputed each finding and checked it against the city's own inspection PDFs.

3,166 inspections 1,387 establishments 8,510 violation entries data collected Sep 26, 2026

The short version

- Some kinds of restaurants do score far worse.** Places the city labels Indian averaged about four times the demerits of American restaurants (12.1 against 3.0 per inspection). That is a big gap but not “orders of magnitude”, and after allowing for inspector, permit type, risk category, chain status and month it is about 2.8 times. A third of their inspections scored 15 or more, against 3%, but that comparison depends heavily on which inspector visited. The data can't say why the gap exists.
- Who inspects matters about as much as what kind of restaurant it is.** Three inspectors whose first published inspections are from July and August 2026 scored the same restaurants about 9 points higher than their previous inspections. They account for nearly all of the city's summer 2026 jump in scores. The data can't say which standard is right.
- The same problem gets written up different ways.** A missing employee-health policy is a 3-point violation from one inspector, a 0-point warning from another, and never cited by four others.
- Closures live only in free text, and most have no published reinspection.** 21 to 23 inspections record a closure or suspension that wasn't lifted during the visit; only 7 are followed by a published reinspection.
- The public portal shows less than the reports do.** The inspection web page omits every 0-point warning (22% of all violation entries). The browse list shows only each establishment's latest inspection, so five of the six worst 2026 inspections drop out once a quick reinspection is posted.
- What inspectors find most:** unsanitized food-contact surfaces, raw food not kept apart from ready-to-eat food, chemicals, and cold food above 41°F. About a third of routine restaurant inspections find at least one Priority violation.

How to read a Frisco score

Frisco uses the Texas DSHS inspection form: a demerit score, so **higher is worse and 0 is perfect**. Each of 47 items marked OUT adds points once per inspection, however many problems are written under it. OUT-W is a written warning worth 0 points. Priority items are conditions that can directly cause illness, such as food temperatures and contamination. Priority Foundation items support them, such as a certified manager, hand-sink supplies and thermometers. Core items cover general sanitation and upkeep.

Priority • items 1–20 • 3 pts

Priority Foundation • 21–33 • 2 pts

Core • 34–47 • 1 pt

OUT-W • warning • 0 pts

In this report, “restaurant” means routine inspections at food-establishment permits, excluding institutional, convenience-store and grocery food types (2,180 inspections at 945 establishments). Finding 1, which compares food-type labels, also leaves out 44 inspections with no label (2,136 at 906). Linked establishment names open the city’s inspection PDF.

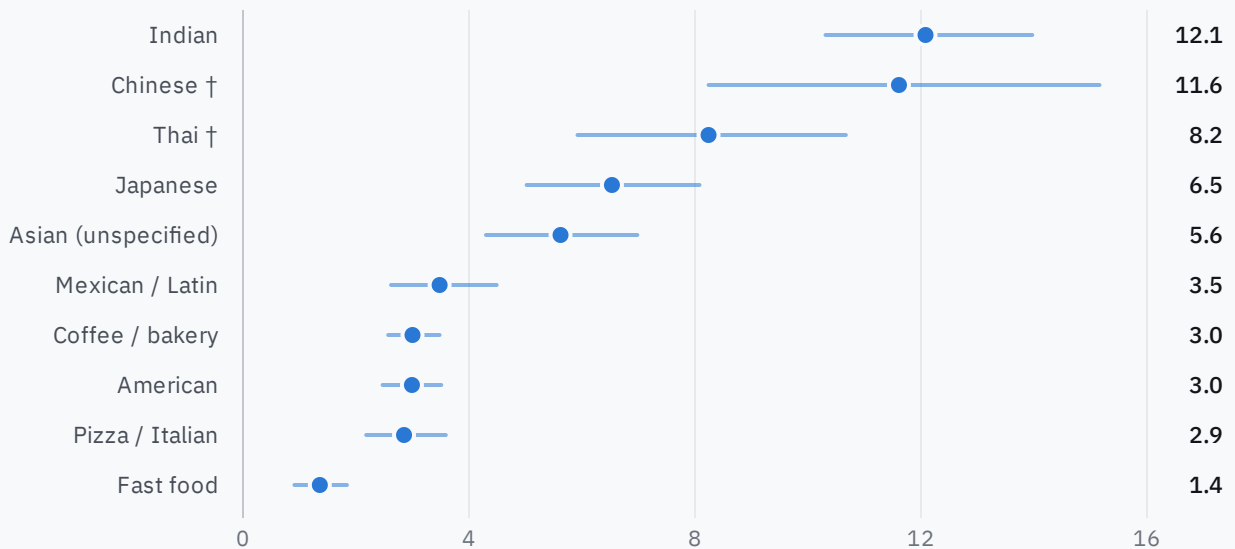

FINDING 1

Some kinds of restaurants score far worse, though not by orders of magnitude

The gap is real and large. Averaged establishment by establishment, restaurants the city labels Indian scored **12.1** demerits per routine inspection and Chinese-labelled restaurants **11.6**. American, coffee and bakery, Mexican and pizza places all scored about **3** to **3.5**, and fast food **1.4**. The confidence intervals don’t come close to overlapping.

Average routine-inspection score by the city’s food-type label

Mean of each establishment’s average score in demerits (higher is worse), with 95% bootstrap interval. Routine inspections at food-establishment permits (2,136 inspections, 906 establishments).

CITY LABEL (GROUPED)	ESTABLISHMENTS	INSPECTIONS	AVG SCORE (95% CI)	INSPECTIONS SCORING 15+
Indian	56	122	12.1 (10.3–14.0)	34%
Chinese †	15	37	11.6 (8.2–15.2)	27%
Thai †	12	30	8.2 (5.9–10.7)	20%
Japanese	38	106	6.5 (5.0–8.1)	11%
Asian (unspecified)	50	138	5.6 (4.3–7.0)	8%
Mexican / Latin	47	127	3.5 (2.6–4.5)	3%
Coffee / bakery	231	517	3.0 (2.6–3.5)	3%
American	191	431	3.0 (2.5–3.5)	3%
Pizza / Italian	63	147	2.9 (2.2–3.6)	3%
Fast food	63	144	1.4 (0.9–1.8)	1%

† Fewer than 20 establishments; treat as indicative. Labels are the city’s and overlap: adding Chinese-cuisine places the city labels “Asian” puts the Chinese average at 9.4 to 11.2, depending on whether Panda Express is counted.

How to say it accurately

SUPPORTED

“Restaurants the city labels Indian averaged about four times the demerits of American restaurants, 12.1 against 3.0 per inspection.”

SUPPORTED, WITH THE CONTROLS

“After accounting for which inspector visited, the permit’s risk tier, whether it is a chain and the month, the gap was about 2.8 times for Indian-labelled restaurants and 2.2 times for Chinese-labelled ones.”

USE WITH CARE

“About a third of their inspections scored 15 or more, against about 3% at American, Mexican, pizza and coffee shops.” That comparison depends heavily on which inspectors visited: the ratio swings from 4 to 14 depending on which inspectors are included.

NOT SUPPORTED

“Orders of magnitude worse” on average scores. The raw ratios are 3.5 to 4 times against sit-down comparison groups, and about 9 times against fast food before controls. Only the share of bad inspections (15+) approaches ten times.

“Asian restaurants” as a group. Japanese, Korean and unspecified “Asian” labels fall between the high group and the comparison groups, 1.3 to 1.6 times American after controls.

The gap after controls

Ratio of average score to American restaurants. Raw ratio: average per inspection, no controls (the chart above averages each establishment first, which puts Indian at 4.0×). Adjusted: Poisson model with inspector, permit type, risk category, chain status and month; 95% intervals clustered by establishment.

CITY LABEL (GROUPED)	RAW RATIO (PER INSPECTION)	ADJUSTED RATIO (95% CI)
Indian	3.5×	2.8× (2.3–3.4)
Chinese †	3.4×	2.2× (1.8–2.8)
Thai †	2.4×	1.6× (1.3–2.1)
Japanese	1.9×	1.6× (1.2–2.0)
Asian (unspecified)	1.6×	1.4× (1.1–1.8)
Coffee / bakery	0.9×	1.2× (1.0–1.5)
Mexican / Latin	1.1×	1.1× (0.8–1.4)
Pizza / Italian	0.8×	1.0× (0.8–1.2)
Fast food	0.5×	0.95× (0.7–1.3)

What drives the gap

It shows up across almost the whole form rather than in one quirky item. Comparing Indian, Chinese and Thai-labelled restaurants with the comparison groups (American, Mexican/Latin, pizza/Italian, coffee/bakery and fast food), the extra 8.2 points per inspection came from these items:

- **31%** contamination, cleaning and sanitizing (items 7–11, 15 and 18). Raw food not kept apart from ready-to-eat food was cited on 38% of inspections, against 5%.
- **25%** one-point core items, such as food stored on the floor or in open cans and dirty non-food surfaces.
- **18%** temperature control (items 1–6), the largest relative gap at 5.2 times. Hot holding was cited on 17% against 2%, and cold holding on 25% against 7%.
- Hand sinks (7%), other Priority Foundation items such as cooling equipment, warewashing and water supply (7%), date marking and thermometers (6%), food-manager certificates (4%) and pests (1%) make up most of the rest.

A screen of logged food temperatures points the same way but shows a much smaller gap, about 1.8 times. Temperature logging is itself partly up to the inspector.

Does the gap hold up?

- **It holds within inspectors.** All nine inspectors who inspected both groups gave Indian, Chinese and Thai-labelled restaurants higher average scores. For example, Victoria Uzu averaged 14.0 against 4.6, and Bryan L Jones 9.0 against 2.7.
- **Fast food's low scores can't be separated from chain ownership.** 90% of fast-food permits are national or regional chains, against 7–11% of Indian, Chinese and Thai ones. With chain status and the other controls, fast food is indistinguishable from American restaurants. Among independent restaurants only, the Indian, Chinese and Thai gap is 3.2 times.

- **Groceries split the same way.** Mainstream supermarkets (Kroger, Walmart, Target, Tom Thumb, Costco and similar) averaged 1.9; the other grocery permits, mostly independent and specialty markets with kitchens, averaged 11.0. Four of the eight worst inspections in the city were at independent or regional specialty markets. Chain status is judged by name, and most supermarkets hold a different permit tier.

Typical examples near each group's median, for checking rather than as representatives of a cuisine: [Desibites Frisco, 11 \(Aug 12, 2025\)](#); [Chennai Cafe, 10 \(Feb 6, 2026\)](#); [Dumpling House, 11 \(Feb 18, 2026\)](#); and for comparison [Ernesto's Mexican Food, 2 \(Aug 11, 2025\)](#), by the same inspector as Desibites.

HANDLE WITH CARE

These are inspection outcomes for establishments carrying a city label, not statements about the people who run or eat at them. The labels are inconsistent: a bubble-tea chain and a yoga center are labelled Indian. Some Indian-labelled restaurants score very well, and nine American ones averaged 10 or more. The data can't say why the gap exists. Menus with more cooking, cooling and holding steps (buffets, batch-cooked dishes), equipment, access to the food-safety programs chains run, training, or how inspectors read those kitchens are all possible. Those are questions for the city and for owners.

FINDING 2

Who inspects matters about as much as what kind of restaurant it is

Frisco's average restaurant score nearly doubled in mid-2026, from 3.6 to 6.8. Nothing in the data shows restaurants got worse: other inspectors' monthly averages in those months (3.2 to 4.1) stayed within their usual range. The jump sits almost entirely in the reports of three inspectors whose first published inspections are dated July 20 to August 28, 2026: **Phoebe Dang, Danea Newman and Feyisara Abati.**

Across restaurant inspections, knowing the inspector explains more of the variation in scores than the city's food-type label (R^2 0.24 against 0.16 for log scores), though part of that reflects which establishments each inspector covers.

Average restaurant score by month

— All other inspectors — Three inspectors first seen Jul–Aug 2026

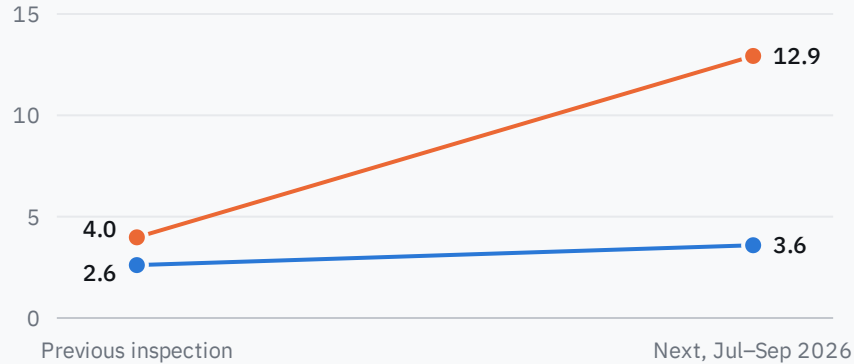

Routine restaurant inspections. The new inspectors' July point rests on 14 inspections; August on 40, September on 75. Monthly values are in Appendix A.

Same restaurants, before and after

— Same inspector as last time (138 restaurants) — Next inspection by a new inspector (124 restaurants)

Restaurants whose next routine inspection came in Jul–Sep 2026: average score at the previous inspection and at that next one.

- **112 of those 124 restaurants scored higher** and 2 lower, an average rise of 8.95 points (95% CI 7.9–10.1). Restaurants re-inspected by the same longtime inspector rose 0.98. The difference is about 8 points.
- **It barely depends on who inspected before.** The rise was about 9 points after visits by Jones, Long, Bell, Uzu or Espronceda, and 5.5 to 6.5 after Youssouf or Fish, so it isn't explained by taking over one low-scoring colleague's route.
- **It isn't the season.** Cold holding was cited on 9.4% of restaurant inspections in July–September 2025 and 9.3% of other inspectors' in July–September 2026, against 40% of the new inspectors'.
- **It isn't new hires in general.** Amir Youssouf, whose first published inspection is from March 2026, shows no comparable jump: at the same restaurants his scores weren't measurably different from Bryan L Jones's.

- In September 2026 the three new inspectors did half of all restaurant inspections and wrote 29 of the 30 scores of 15 or more.

At the other end, **Jose Espronceda** (last published inspection March 24, 2026) recorded fewer violations than colleagues at the same establishments. His scores were about 2.4 points lower than Bryan L Jones's for the same restaurant and month. 63% of his restaurant inspections were a perfect 0, and he wrote warnings on 1% of entries against 11–33% for everyone else. The data can't say whether that reflects leniency, a different way of recording violations, or both. Across all food-establishment inspections, not just restaurants, the gap is smaller (about 1.9 points) and not statistically clear.

Much of Yulonda Bell's low average (1.5) reflects what she inspects: many chains and lower-risk permits. Allowing for food type, permit type and risk category still leaves her about 1 point below Bryan L Jones. At the 61 establishments she shared with other inspectors the difference isn't measurable, but 171 of her 232 restaurants were never inspected by anyone else, so leniency there can be neither shown nor ruled out. Raw inspector averages should not be published as a leniency ranking.

FRAMING

The data show that the standard applied changed with the inspector, not which standard is right. The questions go to the city: training, calibration, and whether guidance changed in mid-2026.

FINDING 3

The same problem gets written up different ways

- **A missing written employee-health policy** (food-code rule 3-301.11(E), filed under item 15) was scored as a 3-point Priority violation on 39 restaurant inspections (27 of them by Dustin M Long) and written as a 0-point warning on 59. Four inspectors (Bell, Uzu, Espronceda and Youssouf) never cited it in 1,299 restaurant inspections.
- **Item 15's printed title is "No bare hand contact with ready to eat foods"**. On about half the web pages showing that violation, the finding is actually the missing policy.
- **Gloves and a phone at Gallo Nero Italian Bistro**. An employee handling a personal phone with gloves on was a 0-point warning in February 2026 ([Uzu](#)). The same behavior was a 3-point hand-washing violation in September 2026 ([Dang](#)).
- **Warnings on Priority items**. They make up 1.2% of one inspector's Priority write-ups and 28% of another's. A dish machine with no detectable sanitizer (0 ppm) drew a warning at one restaurant and a 3-point violation at another.
- **The "Repeat" flag**. When an item cited at one inspection was cited again at the next, the report marked it Repeat only 28% of the time: 7% for Newman (all of whose visits followed another inspector) and 8% for Bell, against 61% for Long. Where the same inspector did both visits, the gap holds: Bell 8%, Long 62%.
- **Blank citations**. 21% of Bell's violation entries carry no food-code citation, against under 1% for most inspectors.

Closures live only in free text, and most have no published reinspection

There is no closure field. We read every report that mentions closing, ceasing, suspension or reopening, and searched the rest. **Between 21 and 23 routine inspections** record an establishment being closed or its permit suspended (in one case, Crumbl Cookies, a voluntary closure) in a way the report doesn't say was lifted during the visit. The range depends on how two same-day cases are read. Five more record a closure or stop to food prep lifted before the inspector left. Complaint investigations aren't published, so this is a minimum. All are listed in Appendix B.

- **No hot water** is the most common reason (10). Then no certified food manager (4), rodents, roaches or sanitation (3), sewage or drain backups (2) and failed refrigeration (2). One cites the score alone (Desi District), and one suspension gives no reason (Frisco Lakes Golf Club).
- **Every inspection that scored above 30** (8 in 15 months) ended in either a documented closure (6) or a demand for a paid reinspection (2). Two reports tie closure to the score itself: Desi District ("scored above a 31 resulting closure") and Utsav ("closed due to no hot water and score above 31"). A third, Premier Desi District, cites a "failed inspection".
- **Only 7 of the 21 to 23 closures have a published reinspection**, all within three days. For 8 or 9, depending on the count, no later inspection of any kind is on the portal yet. Four of those came less than the usual five months between inspections before the data ends, and Deli News closed on the last day in the data. A missing record doesn't mean a business stayed closed: closures for a single hazard, like no hot water, appear to be cleared by photo or email without a published reinspection.
- **Frisco Lakes Golf Club** scored 35 on July 27, 2026. Its report has no closure wording. The [same-afternoon reinspection](#) says the permit had been suspended after the routine inspection and that employees were preparing food when the inspector returned. It wrote that up as a 2-point permit violation, marked corrected on site, and doesn't say whether the suspension was lifted that day. The 35-point inspection doesn't appear in the portal's listing search at all, only on the club's own page.
- **Hot-water outages weren't always handled the same way**, even by the same inspector. Haidilao and Yujo were closed, while Laderach Chocolatier, a chocolate shop whose leaking water heater could still be turned on, was given 10 days to email a repair invoice. The type of food, the length of the outage and what was said on site may explain the difference; it is a question for the city, not a finding.

Every routine inspection that scored above 30

DATE	ESTABLISHMENT	SCORE	RECORDED OUTCOME	NEXT PUBLISHED RECORD
Mar 27, 2026	Chalo India (grocery)	46	Restaurant closed: failed freezers, spoiled food	Reinspection 3 days later: 18
Jun 25, 2025	Desi District (grocery)	44	Closed: "scored above a 31"	Reinspection next day: 3
Nov 13, 2025	Utsav Indian Cuisine	37	Closed: no hot water, score above 31	Reinspection next day: 21, approved to reopen

DATE	ESTABLISHMENT	SCORE	RECORDED OUTCOME	NEXT PUBLISHED RECORD
Jul 21, 2026	Spicy Venue	37	Paid reinspection required; no closure wording	None published
Sep 16, 2026	Premier Desi District (grocery)	36	Closed: roaches, failed inspection	Reinspection next day: 6
Jul 27, 2026	Frisco Lakes Golf Club	35	Permit suspended (stated only on reinspection)	Reinspection same day: 21
Aug 25, 2026	HIFI Bros	35	Paid reinspection required; no closure wording	Reinspection next day: 13
Aug 31, 2026	Southwest Farmers Market (grocery)	34	Closed: rodents, sanitation	Reinspection next day: 0

Five of these eight (Spicy Venue, Frisco Lakes Golf Club, HIFI Bros, Premier Desi District and Southwest Farmers Market) were the first visit by one of the three inspectors first seen in July–August 2026. Only HIFI Bros had a clean record before (8 and 3). The others had previously scored 16 (Spicy Venue); 9 and 21 (Frisco Lakes); 29, 12 and 22 (Premier Desi District); and 28 and 18 (Southwest Farmers Market). A story naming these establishments should give their earlier scores and say who inspected.

FINDING 5

The public portal shows less than the reports do

21.8%

of all violation entries are 0-point warnings, which the inspection web page doesn't display (1,854 of 8,510)

233 of 814

"perfect" 0-score restaurant inspections have at least one written warning in the PDF

5 of 6

of the worst 2026 inspections (above 30) don't appear in the portal's default browse list

- **The inspection web page skips warnings.** It also shows only the first comment under each item number, which leaves out about 650 more entries (7.6%). Warnings include sanitizer at 0 ppm, raw meat over ready-to-eat food, and 10 of the 50 restaurant pest findings. Each page links the full PDF.
- **The browse list shows only each establishment's latest inspection** in the chosen date range, which defaults to Jan. 1 through today. A failed inspection followed by a quick reinspection disappears from it. Chalo India shows 18, not 46; Premier Desi District 6, not 36; HIFI Bros 13, not 35; Frisco Lakes Golf Club 21, not 35; Southwest Farmers Market 0, not 34. The failed reports remain on each establishment's own page. This happens to every establishment's earlier inspections, not only failed ones; allowing for timing, high scores drop out at about the same rate as others.
- **The browse list's "Reinspection" filter never returns anything.** It sends the value "Follow-Up", and reinspections are stored as "Reinspection".
- **The listing itself pages unreliably.** On busy days, paging can repeat some inspections and skip others: on Aug. 26, 2025, one of 26 inspections never appears.

What inspectors find most

In **790 of 2,180** routine restaurant inspections (36%), the inspector scored at least one Priority item, the 3-point items most directly tied to illness. Half of all restaurants had at least one such inspection in the 15 months.

MOST COMMON PRIORITY VIOLATIONS		RESTAURANT INSPECTIONS
10	Food-contact surfaces not clean or sanitized	323 (14.8%)
9	Raw food not kept apart from ready-to-eat food	246 (11.3%)
18	Chemicals not labeled or stored properly	223 (10.2%)
2	Cold food held above 41°F	201 (9.2%)
6	Time as a public-health control not followed	101 (4.6%)
• Cold holding: where the narrative gives a temperature, the warmest food noted had a median of 54°F. 31 inspections found food at 70°F or warmer. • Hand sinks blocked, used for other things, or missing soap or towels (item 31): 390 inspections (17.9%). • Pests: live roaches, rodent droppings, or flies and gnats were recorded in 50 restaurant inspections (2.3%) at 44 establishments. Most item-34 citations are for door gaps or trap placement. • Most Priority violations are fixed on the spot: inspectors marked 89% of scored Priority violations corrected on site. • Rarely cited: sewage (3 inspections) and sick workers (never).		

Limits of the data

- The portal holds nothing before **June 23, 2025**, and nothing is dated after Sept. 24, 2026.
- Only routine inspections and eight reinspections are published: no complaint investigations, foodborne-illness investigations or pre-opening inspections. Several reports labelled Routine reference complaint numbers.
- Food-type labels are the city’s and are inconsistent.
- Five official scores differ from the points printed on the form; the official score is used throughout.
- Inspector start and end dates are inferred from published reports, not personnel records.

Questions for the city

- How are inspectors assigned to establishments? Did training, guidance or scoring expectations change around July 2026? How are inspectors standardized or calibrated against each other?
- Is there a written score threshold for closure (“above 31”)? Were Spicy Venue (37) and HIFI Bros (35) closed? Why is no follow-up published for Spicy Venue?

- When was Frisco Lakes Golf Club’s permit suspended and reinstated? Was the club told of the suspension before the reinspection, and was any enforcement taken beyond the 2-point write-up?
- What is the policy when an establishment has no hot water: when is it closed, and when is it given time to repair?
- Please provide the full closure and reopening log, including how reopenings were verified (photo, email or on-site), plus complaint and illness-investigation records and inspections before June 2025.
- What is the policy on warnings (OUT-W) for Priority items, on citing a missing employee-health policy, and on marking violations Repeat?
- Why does the inspection web page omit warnings? Why does the browse list show only the latest inspection, so that a failed inspection followed by a reinspection drops out, and would the city flag failed inspections and closures there?
- What outreach or training does the city offer independent restaurants and markets on the most-cited items: hot and cold holding, raw/ready-to-eat separation, sanitizing and date marking?

For owners of named establishments: what was corrected, when they reopened, and whether they dispute any findings. The report also names nine inspectors; before publication, give the city, and through it each named inspector, the specific comparisons that involve them and a chance to respond.

How this was checked

Every inspection listed on the city’s portal was collected, and each inspection’s PDF report was downloaded and parsed. The parsed records were cross-checked against the portal’s listing, each establishment’s permit page and a sample of inspection web pages, with zero mismatches. Five reviewers read 50 PDFs by eye and matched every field. Each finding here was produced by one analyst and independently recomputed by a separate fact-checker, who also opened the cited PDFs.

The code, the data (as CSV files) and the scripts that reproduce these numbers are in `frisco_inspections/` on the [project’s pull request](#): see `analysis/category_gap.py`, `analysis/inspectors_and_public_view.py` and `analysis/closures_reviewed.csv`. Source: City of Frisco Health & Food Safety, inspections.myhealthdepartment.com/frisco. Scores are demerits; 0 is perfect.

APPENDIX A

Average restaurant score by month

Routine restaurant inspections. The three new inspectors are Phoebe Dang, Danea Newman and Feyisara Abati. Numbers of inspections in parentheses.

MONTH	OTHER INSPECTORS	NEW INSPECTORS
Jun 2025 (from Jun 23)	4.3 (29)	–
Jul 2025	4.4 (160)	–
Aug 2025	3.9 (170)	–
Sep 2025	2.6 (159)	–
Oct 2025	3.4 (146)	–
Nov 2025	4.0 (100)	–
Dec 2025	3.8 (176)	–
Jan 2026	3.1 (133)	–
Feb 2026	3.0 (227)	–
Mar 2026	3.8 (146)	–
Apr 2026	4.2 (132)	–
May 2026	3.9 (109)	–
Jun 2026	3.9 (106)	–
Jul 2026	4.1 (120)	21.6 (14)
Aug 2026	4.0 (64)	10.4 (40)
Sep 2026 (to Sep 24)	3.2 (74)	12.5 (75)

APPENDIX B

Closures and suspensions recorded in inspection reports

Routine inspections whose report (or, for Frisco Lakes Golf Club, its same-day reinspection) records the establishment being closed, by the inspector or, for Crumbl Cookies, voluntarily, or its permit suspended, with no statement that this was lifted during the visit. Reasons are paraphrased from the report. “Next published record” is the next inspection of the same permit on the portal through Sept. 24, 2026. “None on portal” means only that no later inspection is posted, not that the establishment stayed closed: routine inspections come about every five months, and single-hazard closures appear to be cleared by photo or email.

DATE	ESTABLISHMENT	SCORE	REASON GIVEN	NEXT PUBLISHED RECORD
Jun 23, 2025	Beans & Bubbles ‡	17	No certified food manager	Routine, Dec 2, 2025: 9
Jun 25, 2025	Desi District (grocery)	44	Score above 31	Reinspection, next day: 3

Sep 2, 2026	India Bazaar (grocery)	27	Rodents, sanitation	Reinspection, next day: 0
Sep 16, 2026	Premier Desi District (grocery)	36	Roaches; “failed inspection”	Reinspection, next day: 6
Sep 24, 2026	Deli News	23	No hot water	None yet (recent closure)

‡ Could be read as lifted the same day: Beans & Bubbles’ report also says food-manager certification was verified that day, and at Gyro Twist the report says the owner “with CFM came onsite” and sanitizer was provided. Counting both gives 23 closures; excluding them, 21.

Closed or food preparation stopped, then lifted before the inspector left (not counted above): [Hocco The Indian Kitchen](#) (Jun 18, 2026); [Fresca Palapa](#) (Jul 7, 2026); [Tealattebar Frisco](#) (Jul 13, 2026); [Desi Village](#) (Jul 17, 2026); [Pei Wei Asian Diner](#) (Sep 9, 2026).
